

## Assignment 4.2 – Managing Citations with RMarkdown

Create an R Markdown document that outputs either an HTML or DOC file.

- a. Go to Google Scholar and search for your favorite animal. Be sure to note the search terms you use. Download the citations for the first five **peer-reviewed journal articles** that Google Scholar returns and save them to a .bib file.
- b. Reference each article in a list using code for citing articles with RMarkdown. Give a short (one or two sentences) about each reference. Ensure that there is a successful bibliography at the end of the HTML or DOC file referencing all five articles with full citations.
- c. Make sure your references are formatted in the style of *Nature Genetics*.

Turn in your RMD and Bib files.
